Workshop Description

Gary Anaka - Brain Coach

How to Grow a Child's Brain

Is it possible to grow a child's brain? Definitely, YES! With the right conditions and appropriate support, the brain can grow to its fullest potential. However, it takes years of well chosen experiences interacting with parents, teachers and caregivers to wire the billions of complex neural circuits needed for -- language, emotions, math, creativity, logic, etc. You will learn:

- How movement grows the child's brain
- How to grow dendrites
- The basic needs of the child's brain
- How to brain smart your children early
- 10 strategies to build a brain for lifetime optimal performance

Early childhood is the most critical time for the human brain. Abilities and talents are hard wired in early childhood, building the brain reserve that is needed for an entire life time.

Gary Anaka is a Special Education Teacher, Author, Brain-Based Learning Facilitator, Advocate for Health and Wellness, and Public Speaker. Gary is one of the top Brain-Based Learning facilitators in British Columbia today. He has been a certified facilitator since 1997, receiving on-going training from the Jensen Learning Corporation, a world leader in teacher training in the new field of Applied Educational Neuroscience. Gary has over 30 years of classroom experience in Learning Assistance, Peer Tutoring, Gifted/Enrichment and Study Skills, at the high school level in Canada and Australia.
