THE POWER OF PLAY

A Five Part Series that Dives into the Minds of Young Children

This series looks at the holistic development of children from infancy to age five with a focus on different aspects of child development.

Did you know that 90% of a child’s cognitive development occurs by the age of five? And that play is the most valuable way that children learn!

In each course we will explore social and emotional development, physical growth and learning through art and sensory play.

The Power of Play Workshops can be taken as a series to develop a robust understanding of learning through play or taken individually to learn more about particular areas of interest. Each workshop will be a combination of learning about current research and developing a make-and-take to share with the children you teach.

Take 1 or 2, or take them all ...the choice is up to you!

How Children Develop Emotional Intelligence
Make and Take: Mix and Match Table Top Feelings Game
